

The fund was up 9.0% in the final quarter, underperforming other general equity funds (up 10.5% on average) and up 1.3% in 2022 (versus 3.1% for competitors). It has returned 11.2% pa over the last three years, ahead of the competitor fund average (10.2% pa). Since its inception in 2004, it is the third ranked general equity fund in South Africa, having delivered 15.6% pa since then, with a 10.2% pa return over the last decade.

Economic backdrop

US economic activity is growing moderately from healthy levels despite headwinds from sharply rising interest rates, waning fiscal stimulus, slowing residential investment, notably higher consumer inflation and concerning geopolitical tensions. The US labour market has been resilient thus far and household balance sheets remain robust, although consumer confidence has declined. The US dollar strengthened considerably last year as the Federal Reserve Bank lead globally with interest rate hikes to tackle high inflation.

Europe's economy is weakening, with higher inflation (due to high energy prices exacerbated by a weaker currency) and very low consumer confidence. Although the war in Ukraine continues to impact (primarily via the sanctions on Russia raising energy and agricultural product prices), success in reducing gas consumption and securing alternative energy sources, coupled with a very mild winter period, has helped to prevent a deeper contraction. German manufacturing and exports, particularly automotive production, should benefit from easing global supply chain frictions and recovering production in the constrained semi-conductor sector.

Japanese economic activity has seen solid recent recovery due to the complete lifting of COVID restrictions (improving business sentiment and private consumption) and continued strong export activity - all against a backdrop of an extremely loose monetary policy and very weak yen. As with Germany, Japanese manufacturing and exports should benefit from easing global supply chain frictions and reduced semi-conductor lead times.

Chinese economic activity, particularly consumption, is finally recovering from the self-enforced slowdown from prolonged urban pandemic lockdowns, which are rapidly being unwound. Property market activity, while still very weak, is slowly benefitting from some policy easing. Chinese government policy has shifted more towards promoting growth after the economy, in 2022, posted the lowest annual growth rate since the 1970s.

The outlook for other developing economies differs widely, with varying exposures to high commodity prices (energy, metals and agricultural prices), persistently weak tourism activity and the closure of Chinese borders. Some poorer economies in particular are facing extremely high food and energy inflation, which is leading to increased socio-economic and fiscal instability.

After a very moderate rebound from the COVID lows last year, the outlook for the South African economy has weakened due to sharply worsening electricity and logistics constraints - despite continued strength in the primary sectors (mining and agriculture). With a large, unskilled population, South Africa continues to grapple with excessively high unemployment levels. This exacerbates social instability, particularly in the face of rising food and transport prices. Growth is also severely constrained by an inadequate and acutely unstable electricity supply, underperformance of transport infrastructure, weakened and revenue-hungry municipalities and chronically low business confidence. For these reasons, coupled with the very large government debt burden, we remain pessimistic regarding the structural growth rate for the local economy, despite signs of some incremental government moves towards economic reforms. Additionally, there is a risk that lower future commodity prices (particularly platinum group metals, iron ore and coal) will result in even weaker prospects.

Market review

Global markets were positive in the final quarter (up 9.9% in US dollars), with Germany (up 25.7%) and France (up 23.2%) outperforming. Emerging markets were also positive in the period (up 9.8%), with outperformance from Turkey (up 62.9%), South Africa (up 18.5%) and South Korea (up 17.8%), while Brazil (up 3.3%) and India (up 2.1%) underperformed. 2022 was a very weak year for global equity markets (down 17.7% overall).

In rand terms, the local equity market was up 15.2% in the period. Resources outperformed (up 17.6%) with Harmony (up 38.2%), AngloGold (up 31.9%) and Kumba Iron Ore (up 26.9%) particularly positive. Sasol (down 5.7%), South32 (up 6%) and Sibanye (up 6.5%) underperformed.

Industrials were also positive (up 17.0%) driven by robust performances from Richemont (up 30.4%) and Naspers and Prosus (up 25.1% and 24.2% respectively). Other standout positive performers included AB Inbev (up 24.2%) and Tigerbrands (up 23.9%). Weak performances were delivered by Telkom (down 35.3%), Spar (down 19.3%), Foschini (down 14.1%) and Dischem (down 8.9%).

Financials underperformed the other sectors (up 13.9%), with listed property up 19.3%, banks up 15.0% and life insurers up 4.3%. Investec (up 53.9%), Growthpoint (up 29.0%) and NEPI Rockcastle (up 27.2%) outperformed, while Sanlam (down 5.6%), Quilter (up 2.9%) and Remgro (up 3%) underperformed.

The local market was positive for the year (up 3.6%). Financials were up 10.2%, resources were up 7.1% and industrials were down 3.1%.

Fund performance and positioning

The key positive contributors in the third quarter were Prosus, Anglo American, Northam Platinum and Anglo Platinum as well as the global equity exposure. Negative contributors included Telkom, Omnia, Libstar and Sanlam.

Global equity contributed positively to performance and key contributors included Siemens, Siemens Energy, Prudential, Associated British Foods and Timken. Amazon, Walt Disney and Philips detracted.

Our portfolios currently have high exposure to Prosus, the PGM miners, Anglo American, Datatec, Sanlam, MTN and a diverse range of other mispriced stocks, including an array of deeply discounted local mid-cap stocks.

MTN is Africa's largest mobile telecommunications company and is well diversified, operating in over 17 countries on the continent. It is exposed to several secular growth drivers such as rising data consumption, the rapid expansion of mobile money services to the large unbanked population on the continent and growing demand for enterprise connectivity. The mobile money opportunity is particularly exciting, having grown by more than 50% per annum since 2015, and is still considered nascent with a sizeable scope for growth. The mobile money business model is capital light and lucrative, with the potential to be a material contributor to the cashflows of the group in the long run. In addition to these secular growth opportunities, management is focused on improving financial returns through reducing costs, scaling its digital solutions businesses and corporate restructuring - all of which have the potential to add additional value. Despite these attractions, the company trades at a low single digit earnings multiple, creating the opportunity for outsized shareholder returns.

We continue to maintain a high weighting in Prosus, which remains undervalued despite its recent strong rally off intra-quarter lows. Its key asset, Hong Kong-listed Tencent, has a very bright, long-term future through its exposure to online Chinese economic activity. Tencent's prospects are excellent, even as it navigates the current period of high and abnormally front-loaded regulatory interventions (many of which are sensible and will lead to healthier and more sustainable future growth).

Disclaimer

The Camissa unit trust fund range is offered by Camissa Collective Investments (RF) Limited (Camissa), registration number 2010/009289/06. Camissa is a subsidiary of Camissa Asset Management (Pty) Limited [a licensed financial services provider (FSP No. 784)], the investment manager of the unit trust funds. Camissa is a member of the Association for Savings and Investment SA (ASISA) and is a registered management company in terms of the Collective Investment Schemes Control Act, No 45 of 2002.

Unit trusts are generally medium to long-term investments. The value of units will fluctuate and past performance should not be used as a guide for future performance. Camissa does not provide any guarantee either with respect to the capital or the return of the portfolio(s). Foreign securities may be included in the portfolio(s) and may result in potential constraints on liquidity and the repatriation of funds. In addition, macroeconomic, political, foreign exchange, tax and settlement risks may apply. However, our robust investment process takes these factors into account. Unit trusts are traded at ruling prices and can engage in scrip lending and borrowing. Exchange rate movements, where applicable, may affect the value of underlying investments. Different classes of units may apply and are subject to different fees and charges. A schedule of the maximum fees, charges and commissions is available upon request. Commission and incentives may be paid, and if so, would be included in the overall costs. Camissa has the right to close the portfolio to new investors in order to manage it more effectively in accordance with its mandate.
