

The fund was down 1.5% this quarter, underperforming its benchmark of FTSE World Index (up 3.2%). The fund underperformed its benchmark over the past year, returning 9.9% (versus the benchmark 14.3%).

With the unexpected pandemic market shock now more than a year behind us and materially changed economic prospects for the companies and economies in which we invest, we are pleased with the extent of our fund's rebound and outperformance.

### **Economic backdrop**

Rapid rollout programs of (very effective) vaccines have substantially progressed in many developed markets, with laggard countries (like Germany and Japan) rapidly catching up. This is allowing a faster return to more normal activity in those regions, limiting further scarring in services sectors (particularly tourism and leisure). Unfortunately, several less wealthy nations are enduring continued heavy Covid-19 impacts, accompanied by slow vaccine rollouts. This is delaying their economic recoveries. It currently appears that the rate of vaccine rollouts is insufficient to contain the virus worldwide and, with mutations occurring where the virus is raging, it is likely that negative economic effects will endure for an extended period of time.

Developed market consumer and corporate health appears to have been largely preserved through extensive and ongoing fiscal and monetary support. Labour markets are reasonably healthy and are thus far showing resilience where government sponsored furlough schemes are ending. In the USA, the level of fiscal support has increased further this year and is currently providing a positive and enduring boost for the global economy. In the near-term it seems that many developed economies are growing at above trend levels post their pandemic recoveries. Nevertheless, sustainable economic conditions may be visible only when fiscal support and monetary stimulus meaningfully tapers off more meaningfully and the reality of permanent job losses manifests.

Following a rapid resumption of economic activity back to pre-crisis levels, the Chinese economy is once again growing strongly. This is largely due to the successful early containment of the pandemic, government stimulus (which boosted infrastructure and residential investment in particular) and surprisingly strong exports and manufacturing activity. Initially exports were buoyed by temporary Covid-19-related goods demand and thereafter sustained by improving global activity. Consumer spending has recovered (showing reasonable growth off pre-crisis levels) but confidence remains lackluster. Pre-crisis risks, however, remain - a disruptive moderation and rebalancing of economic growth (away from fixed asset investments and towards consumption) and potential further deterioration in geopolitical relations.

The local economy has continued to recover, with consistently high commodity prices (particularly platinum group metals and iron ore) significantly supporting economic outcomes and the agricultural sector remaining buoyant. However, with an ineffective vaccine rollout, recurring Covid-19 variant surges continue to hamper the recovery of our services sectors. South Africa is lagging the global recovery considerably, showing signs of permanent economic damage from the lockdown and years of state mismanagement. We suffer from a very depressed labour market, unstable electricity supply, weakened and tax-hungry municipalities and chronically low business and investment confidence. For these reasons, we remain pessimistic regarding the structural growth rate for the local economy (which we believe has severely weakened in recent years) and have been wary of extrapolating a short-term cyclical growth rebound too far into the future when valuing cash flows.

While economic revival plans are well articulated, they still rely too heavily on implementation from weakened state institutions and do not draw sufficiently on private sector participation. However, recent actions to liberalise private sector electricity production are a step in the right direction. In addition, actions to rebuild crime fighting and tax collection capabilities are advancing, although still far from sufficient and far too slowly. A full post-crisis economic recovery will take meaningfully longer than the rest of the world due to the inherent structural weaknesses of the South African economy, with increased risk due to unsustainably high sovereign debt.

The shocking and tragic recent looting unrest and resultant sapping of business confidence and economic damage (particularly in KwaZulu-Natal) are another reminder of the long-term structural growth impediments we face. Recurrent social instability and unrest is an unfortunate inevitability given very high levels of unemployment and inequality.

The medium-term outlook for developing economies varies widely at present, with differing exposures to volatile energy prices (importers versus exporters), strong other commodity prices, decimated tourism industries and differing impacts from the management of the pandemic and progress of vaccine rollouts. Due to recovering domestic demand and some signs of increased inflation, policy interest rates have started normalising higher in these economies from the extraordinarily low crisis levels.

### **Market review**

Global markets were once again strong this quarter (up 7.9% in US dollars), with France up 10.0%, the UK up 5.7% and the USA up 8.5%. Within emerging markets (up 5.1% in dollar terms), Brazil (up 23.8%) and Russia (up 14.4%) outperformed, while South Africa (down 1.3%) lagged. Over the last 15 months global equity markets have recovered very strongly from the March 2020 lows (up 67% overall).

Extremely high developed market fiscal and monetary stimulus measures are providing a powerful support for financial markets and have led to dramatic increases in general asset prices. We expect increased volatility and weakness in many now buoyant areas when fiscal stimulus inevitably wanes, if sustained inflation emerges at last and when interest rates rise from their extremely low levels.

### **Fund performance and positioning**

The underlying fund's underperformance relative to the FTSE World Index over the second quarter of 2021 was due to our overweight positioning in quality cyclical companies, combined with weaker performances from some of our Industrial, Consumer Discretionary and IT holdings. Our Energy, Financials, Materials and Real Estate sectors contributed to positive absolute and relative performance. Our significant underweight positioning in the Information Technology sector, which had a strong quarter, was a drag on performance relative to the benchmark.

We saw positive contributions from Inpex and Kinder Morgan in the Energy sector and we benefited from a strong performance from Spire Healthcare. Other notable positive contributors in the quarter were Nisshinbo, M&G, Sarana Menara and Aroundtown. Siemens Energy, Prudential, Fiserv and Ballard Power Systems were the main detractors to absolute performance in the quarter.

The fund maintained significant underweight positions in the Communication Services, Consumer Discretionary, Information Technology and Utilities sectors in the past 3 months. The sectors where the fund had overweight exposure are in the Energy (Kinder Morgan and Inpex), Materials (DuPont, Evonik, Corteva and Johnson Matthey), Industrial (SKF, Bodycote, Siemens, Timken and Nisshinbo) and Real Estate (Aroundtown, Unibail-Rodamco-Westfield and Grand City) sectors.

Our fund is mainly positioned in companies listed in developed markets, with exposure to a broad range of diversified sectors. Some examples of the global structural themes underpinning some of our holdings include an ageing population (hospitals, pharmaceuticals, financial services), tomorrow's workforce (automation and robotics), future mobility (energy storage, components and consumables), food security (crop protection, fertilisers, seeds and aquaculture) and green energy transition (wind and hydrogen power).

We have maintained our positioning in high quality cyclical companies as we believe that share price levels are still low relative to their long-term prospects and they should provide very attractive forward-looking returns.

### **Disclaimer**

The Kagiso unit trust fund range is offered by Kagiso Collective Investments (RF) Limited (Kagiso), registration number 2010/009289/06. Kagiso is a subsidiary of Kagiso Asset Management (Pty) Limited [a licensed financial services provider (FSP No. 784)], the investment manager of the unit trust funds. Kagiso is a member of the Association for Savings and Investment SA (ASISA) and is a registered management company in terms of the Collective Investment Schemes Control Act, No 45 of 2002.

Unit trusts are generally medium to long-term investments. The value of units will fluctuate and past performance should not be used as a guide for future performance. Kagiso does not provide any guarantee either with respect to the capital or the return of the portfolio(s). Foreign securities may be included in the portfolio(s) and may result in potential constraints on liquidity and the repatriation of funds. In addition, macroeconomic, political, foreign exchange, tax and settlement risks may apply. However, our robust investment process takes these factors into account. Unit trusts are traded at ruling prices and can engage in scrip lending and borrowing. Exchange rate movements, where applicable, may affect the value of underlying investments. Different classes of units may apply and are subject to different fees and charges. A feeder fund is a portfolio that invests in a single portfolio of a collective investment scheme, which levies its own charges and which could result in a higher fee structure for the feeder fund. A schedule of the maximum fees, charges and commissions is available upon request. Commission and incentives may be paid, and if so, would be included in the overall costs. Kagiso has the right to close the portfolio to new investors in order to manage it more effectively in accordance with its mandate. Additional information is available free of charge on our website or from Client Service.
