MONTHLY COMMENTARY

The fund's relatively high cash weighting and underweight positions in Resources counters contributed to the outperformance over the last month. The defensive fund positioning is mainly due to our bearish view on the global equity market and the impact of a potential de-rating in equity valuations on our domestic market. We believe this asset and sector allocation is prudent as a bulwark against capital loss for our investors. Despite the fund's underweight position in Resources, our research indicates that selected equities in the Resources sector remains attractively priced and we will continue to increase the fund's exposure to these equities.

Unit trusts should be considered a medium- to long-term investment. The value of units may go down as well as up. Past performance is not necessarily an indication of future performance. Unit trusts are traded at ruling prices and can engage in scrip lending and borrowing. Fluctuations or movements in exchange rates may cause the value of underlying investments to go up or down. Instructions must reach the Management Company before 2pm (12pm for the Money Market Fund) to ensure same day value. Fund valuations take place at approximately 15h00 each business day and forward pricing is used. The manager is a member of ASISA. ¹Performance is quoted from Morningstar as at 30 April 2010 for a lump sum investment using Class A NAV prices with income distributions reinvested. Performance figures are quoted after the deduction of all costs incurred within the fund. ²The TER is calculated as a percentage of the average NAV of the portfolio incurred as charges, levies and fees in the management of the portfolio for a rolling 12-month period to end March 2010. A higher TER ratio does not necessarily imply a poor return nor does a low TER imply a good return. The current disclosed TER cannot be regarded as an indication of future TER's.
