

The fund was up 0.7% in the first quarter, underperforming its benchmark of FTSE World Index (up 8.6%). The fund delivered a 4.2% return over the last year and 3.3% per annum annualized return over the last 5 years.

Economic backdrop

Global economic activity remains firm, benefiting from easing financial conditions and strong developed market real household income growth due to sharply falling inflation and higher wages. The US economy, in particular, is demonstrating strength, with relatively strong consumption underpinned by a robust labour market, healthy immigration and high aggregate household wealth.

Europe's economy, which has stagnated given its link to China's weak economic recovery, should benefit meaningfully from a rebound in global manufacturing activity from low levels, lower gas prices and increased government investment (particularly in the South). Japan is sustaining solid economic activity, with increasing private consumption due partly to high wage growth and improving business investment. The very weak currency is also aiding exports and inbound tourism.

Following a very weak post-Covid reopening recovery, Chinese economic growth is very slowly accelerating, but is weak in nominal terms due to persistent deflation. Property market activity has been considerably weak for a sustained period and has depressed consumer confidence. Nonetheless, there is an improvement in exports, manufacturing and infrastructure spending.

Economic activity in South Africa is severely constrained by inadequate electricity supply, acute underperformance of transport infrastructure, poor service delivery from weak and revenue-hungry municipalities and chronically low business confidence. Additionally, the economic contribution from the mining sector that has benefitted from high commodity prices, is now far lower. For these reasons, coupled with the sizable government debt burden and a large, unskilled population with high unemployment levels - we remain pessimistic regarding the structural growth rate for the local economy. Gradual steps by government toward economic reform (now involving more productive private sector partnerships) need to hasten to stabilise the economy and prevent further decline.

Markets review

Global markets were strongly positive in the first quarter (up 9.0% in US dollars), with Japan (up 13.1%) and the US (up 10.6%) outperforming. Emerging markets were also positive in the period (up 2.4%), with outperformance from Turkey (up 14.6%), India (up 6.1%) and South Korea (up 0.7%). South Africa (down 6.7%) and Brazil (down 7.5%), however, underperformed.

Fund performance and positioning

Key positive contributors were Hochtief, Bayer and SKF. Global equity detractors included Pfizer, Johnson Electric and Roche. We remain overweight European equities and substantially underweight US equities relative to our benchmark.

Disclaimer

Camissa Islamic Global Equity Fund is a sub-fund of Camissa Global Asset Management ICAV. This Fund is managed by KBA Consulting Management Limited. The Fund and the Manager are authorised in Ireland and regulated by the Central Bank of Ireland.

Unit trusts are generally medium to long-term investments. The value of units will fluctuate and past performance should not be used as a guide for future performance. Camissa does not provide any guarantee either with respect to the capital or the return of the portfolio(s). In addition, macroeconomic, political, foreign exchange, tax and settlement risks may apply. However, our robust investment process takes these factors into account. Unit trusts are traded at ruling prices and can engage in scrip lending and borrowing. Exchange rate movements, where applicable, may affect the value of underlying investments. Different classes of units may apply and are subject to different fees and charges. Camissa has the right to close the portfolio to new investors in order to manage it more effectively in accordance with its mandate.
