

Kagiso Protector Fund

August 2017

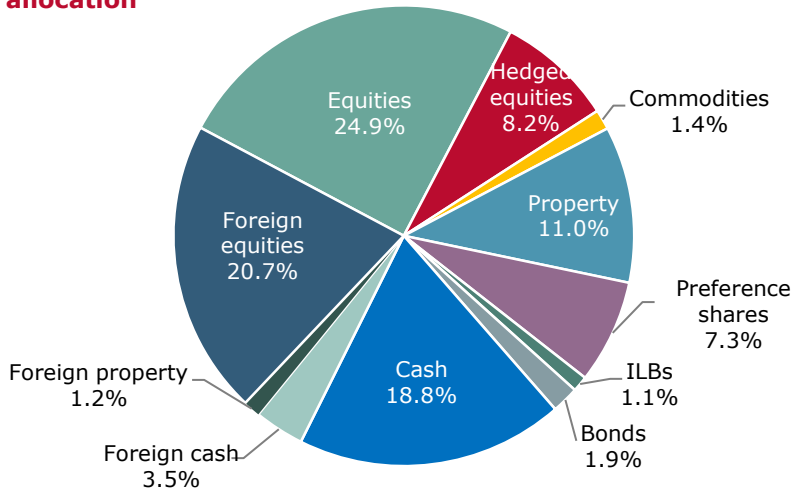

Date of issue: 27 September 2017

Risk profile

This fund is Regulation 28 compliant and can invest in a variety of domestic and international asset classes (such as equities, listed property, conventional bonds, inflation-linked bonds and cash). It is positioned in our team's best investment ideas - which emanate from our bottom-up research process - and is actively managed to reduce volatility and downside risk. Derivative strategies are employed.

Hospitality Property Fund	2.5%	EPE Capital Partners	2.3%
		Total	29.7%

¹ TER (total expense ratio) = % of average NAV of portfolio incurred as charges, levies and fees in the management of the portfolio for the rolling three-year period to 30 June 2017. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not necessarily be an accurate indication of future TERs.

² Transaction costs (TC) are unavoidable costs incurred in administering the financial products offered by Kagiso Collective Investments and impact financial product returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of financial product, the investment decisions of the investment manager and the TER. This is also calculated on the rolling three-year period to 30 June 2017.

Portfolio Manager
Justin Floor

Fund objective

To provide steady capital growth and returns that are better than equity market returns on a risk-adjusted basis over the medium to longer term.

This fund is suitable for investors looking for exposure to the long-term inflation-beating characteristics of equities, with reduced downside exposure and volatility and a strong focus on capital preservation.

Highest and lowest monthly fund performance during specified period

Consecutive months of change in the same direction

* The Sharpe ratio is used to measure how well the return of an asset compensates the investor for the risk taken. The higher the Sharpe ratio the better the Fund's historical risk-adjusted performance has been. This is calculated by taking the difference between the Fund's annualised return and the risk-free (cash) rate, divided by the standard deviation of the Fund's returns.

¹ Performance is quoted from Morningstar as at month-end for a lump sum investment using Class A Net Asset Value (NAV) prices with income distributions reinvested (income is reinvested on the reinvestment date). NAV refers to the value of the fund's assets less the value of its liabilities, divided by the number of units in issue. Performance figures are quoted after the deduction of all costs incurred within the fund. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestment and dividend withholding tax. All performances are annualised (ie the average annual return over the given time period). Actual annual figures are available on request from Client Service.

Fund size	R124.44 million
NAV	2,863.22 cpu
Benchmark	Risk adjusted returns of an appropriate SA large cap index (managed to CPI + 5%)
