

PORTFOLIO MANAGER COMMENTARY

World markets rallied strongly over the quarter driven largely by improving signs of a sustained global recovery and increased investor risk appetite. Over the quarter, the S&P 500 index was up 15%, the FTSE 100 index was up 20.8% while emerging market indices were even stronger in dollar terms (MSCI EMF was up 20.1%).

Commodity prices in general ended the quarter in positive territory, with base and precious metals in particular, having a strong quarter. After a strong rally in the oil price in the previous quarter, oil retreated slightly to end the quarter down 5%. On the currency front, the rand continued to strengthen against the dollar and closed the quarter at R7.51 to the dollar, 3% stronger than its June-09 closing level.

In line with global markets, the FTSE/JSE All Share index continued its positive momentum and closed up 13.3% over the quarter. The local market was particularly strong in the early half of the quarter (In July and August the market was up 10.3% and 2.9% respectively) but lost momentum towards the end of the quarter as resource stocks came under pressure. For the quarter, Industrials were up 16.3% and Financials were up 15.6%, while resources shares lagged the overall market (up 11.1%). These strong gains were achieved despite a weak domestic economic environment.

Over the quarter the fund performed in line with its benchmark and continues to closely track the FTSE/JSE Top 40 index. All index changes that occurred during the quarter were timeously acted upon so as to minimise the relative risk in the fund.

Advice Costs (excluding VAT)

- Initial and ongoing advice fees may be facilitated on agreement between the Client and Financial Advisor.
- Ongoing advice fees may be negotiated to a maximum of 0.25% per annum, charged by way of unit reduction and paid to the Financial Advisor monthly in arrears. This annual advice fee is not part of the normal annual management fee as disclosed above.
- Where commission and incentives are paid, these are included in the overall costs.

Unit trusts should be considered a medium- to long-term investment. The value of units may go down as well as up. Past performance is not necessarily an indication of future performance. Unit trusts are traded at ruling prices and can engage in scrip lending and borrowing. Fluctuations or movements in exchange rates may cause the value of underlying investments to go up or down. Instructions must reach the Management Company before 2pm (12pm for the Money Market Fund) to ensure same day value. Fund valuations take place at approximately 15h00 each business day and forward pricing is used. The manager is a member of ASISA. Performance is quoted from Morningstar as at 30 September 2009 for a lump sum investment using Class A NAV prices with income distributions reinvested. Performance figures are quoted after the deduction of all costs incurred within the fund. ²The TER is calculated as a percentage of the average NAV of the portfolio incurred as charges, levies and fees in the management of the portfolio for a rolling 12-month period to end September 2009. A higher TER ratio does not necessarily imply a poor return nor does a low TER imply a good return. The current disclosed TER cannot be regarded as an indication of future TER's. Coronation Management Company Ltd is a registered collective investment scheme management company, providing hosting and other administrative services for unit trust funds, including Kagiso Funds.
