Standard Bank	4.0
Firststrand/RMB	3.6
Old Mutual	2.5
Total	64.3

The Kagiso unit trust fund range is offered by Kagiso Collective Investments Limited (Kagiso), registration number 2010/009289/06, a voting member of the Association for Savings and Investment SA (ASISA). Kagiso is a subsidiary of Kagiso Asset Management (Pty) Limited (a licensed financial services provider (FSP No. 784)), the investment manager of the unit trust funds. Unit trusts are generally medium to long-term investments. The value of units will fluctuate and past performance should not be used as a guide for future performance. Unit trusts are traded at ruling prices and can engage in scrip lending and borrowing. Exchange rate movements, where applicable, may affect the value of underlying investments. Different classes of units may apply and are subject to different fees and charges. A schedule of the maximum fees, charges and commissions is available upon request. Commission and incentives may be paid, and if so, would be included in the overall costs. All funds are valued and priced at 15:00 each business day and at 17:00 on the last business day of the month. Forward pricing is used. The deadline for receiving instructions is 14:00 each business day in order to ensure same day value.

¹ Performance is quoted from Morningstar as at month-end for a lump sum investment using Class A Net Asset Value (NAV) prices with income distributions reinvested. NAV refers to the value of the fund's assets less the value of its liabilities, divided by the number of units in issue. Performance figures are quoted after the deduction of all costs incurred within the fund.

² The Total Expense Ratio (TER) is calculated as a percentage of the average NAV of the portfolio incurred as charges, levies and fees in the management of the portfolio for a rolling 12-month period to end September 2012. A higher TER ratio does not necessarily imply a poor return nor does a low TER imply a good return. The current disclosed TER cannot be regarded as an indication of future TERs.

Commentary

Global markets were generally up during the quarter, with the exception of the US (S&P 500 Index), which was down 1.0% as uncertainty around the looming fiscal cliff deadline affected investor sentiment. The UK (FTSE 100 Index) was up 2.7%, Japan (Nikkei 225) was up 17.2% and the MSCI Emerging Markets Index was up 5.2% (in US dollar terms).

Commodity prices weakened this quarter, with most commodities relevant to South African miners losing ground - platinum was down 5.2% (in US dollar terms), gold was down 5.5% and copper was down 2.7%. During the quarter, renewed optimism on Chinese growth led to an improvement in base metals. Consequently, iron ore prices recovered strongly as buying was boosted by stronger activity and falling inventory levels. The oil price (Brent Crude) remained fairly static, down a mere 0.4% during the quarter.

The rand weakened by 1.9% against the US dollar and 4.4% against the euro. The rand depreciated notably in October at a time of severe labour unrest and the downgrading of South Africa's sovereign rating. However, it performed strongly in December, gaining 5.1% against the dollar as concerns about Europe's slowdown eased and the appointment of Cyril Ramaphosa as ANC Deputy President was well received by global markets.

The FTSE/JSE All Share Index gained 10.3% during the quarter, ending the year near a record high. In terms of sector performance, industrials (12.4%) were the largest contributors, followed by financials (9.9%). Resources (7.3%) recovered a little as Chinese data improved and the iron ore price rallied. For the year, the FTSE/JSE All Share Index returned 26.7%. Industrials (40.7%) and financials (38.1%) performed well, with resources (+3.1%) lagging.

The fund continues to closely track its benchmark, the FTSE/JSE Top 40 index, which closed the quarter up 10.9%. All index changes that occurred during the quarter were timely acted upon so as to minimise the relative risk in the fund.
